L: 37.79 inch (960mm) - 56.30 inch (1430mm)

Multilevel TN Version

MAXIMUM VISIBILITY

- Large display area
- The base has an internal depth of 24" (60 cm), thus being able
- also accommodate standard 24" (60 cm) trays.

ENHANCE EVERY DETAIL

- The showcase has a large front glass, which characterizes the extreme transparency of the showcase, making its content the first protagonist.
- The front glass is single and heated: therefore it prevents the formation of condensation
- The front glass opens downwards by manually unscrewing the screws at the ends

Multilevel TN Version

CUSTOMIZABLE DISPLAY

- The structure of the display shelves uses a dedicated support system. The classic holes present in the rack structures are now replaced by a frame of light that enhances the exposure.
- The shelf supports move up and down sliding on rails placed on the rear uprights
- Each shelf is adjustable in 3 positions, with a step of 1'.18 (30 mm)
- The shelves are adjusted by manually loosening the screws of the shelf supports.

Multilevel TN Version

Containment of the cold and ergonomics of service

Double glazed sliding doors (TN version) with hermetic closure, designed to contain cold and energy, and allow maximum service ergonomics.

- Opening stop system, to serve and load easily without worrying about keeping the slide open
- The system closes with a click, to ensure the tightness of the closure and containment of the cold, favoring energy saving
- Acoustic alarm, in case of accidental opening
- The sliding doors are easily removable manually to simplify the operations of removing and cleaning the shelves

Multilevel TN Version

Easy maintenance

- The necessary routine cleaning of the condenser is very simple.
- The condenser is in fact protected by an easily removable and washable filter, without the need and costs of intervention of a specialized operator.
- Access to the filter does not require the use of tools and is quick and easy.

Multilevel TN Version

Safety and hygiene

- The inclusion of an air circulation sanitation system is available in the showcase
- the system is able to sanitize the air inside the display case and break down the bacterial load *

* result of experiments conducted in a certified laboratory. A double test was conducted on two types of bacteria, commonly found on food, and with particular characteristics of resistance to low temperatures.

Laboratory test to reduce bacterial load in the Multilevel showcase. Technician during the air sampling phase.

Multilevel TN Version

The protagonist is the content

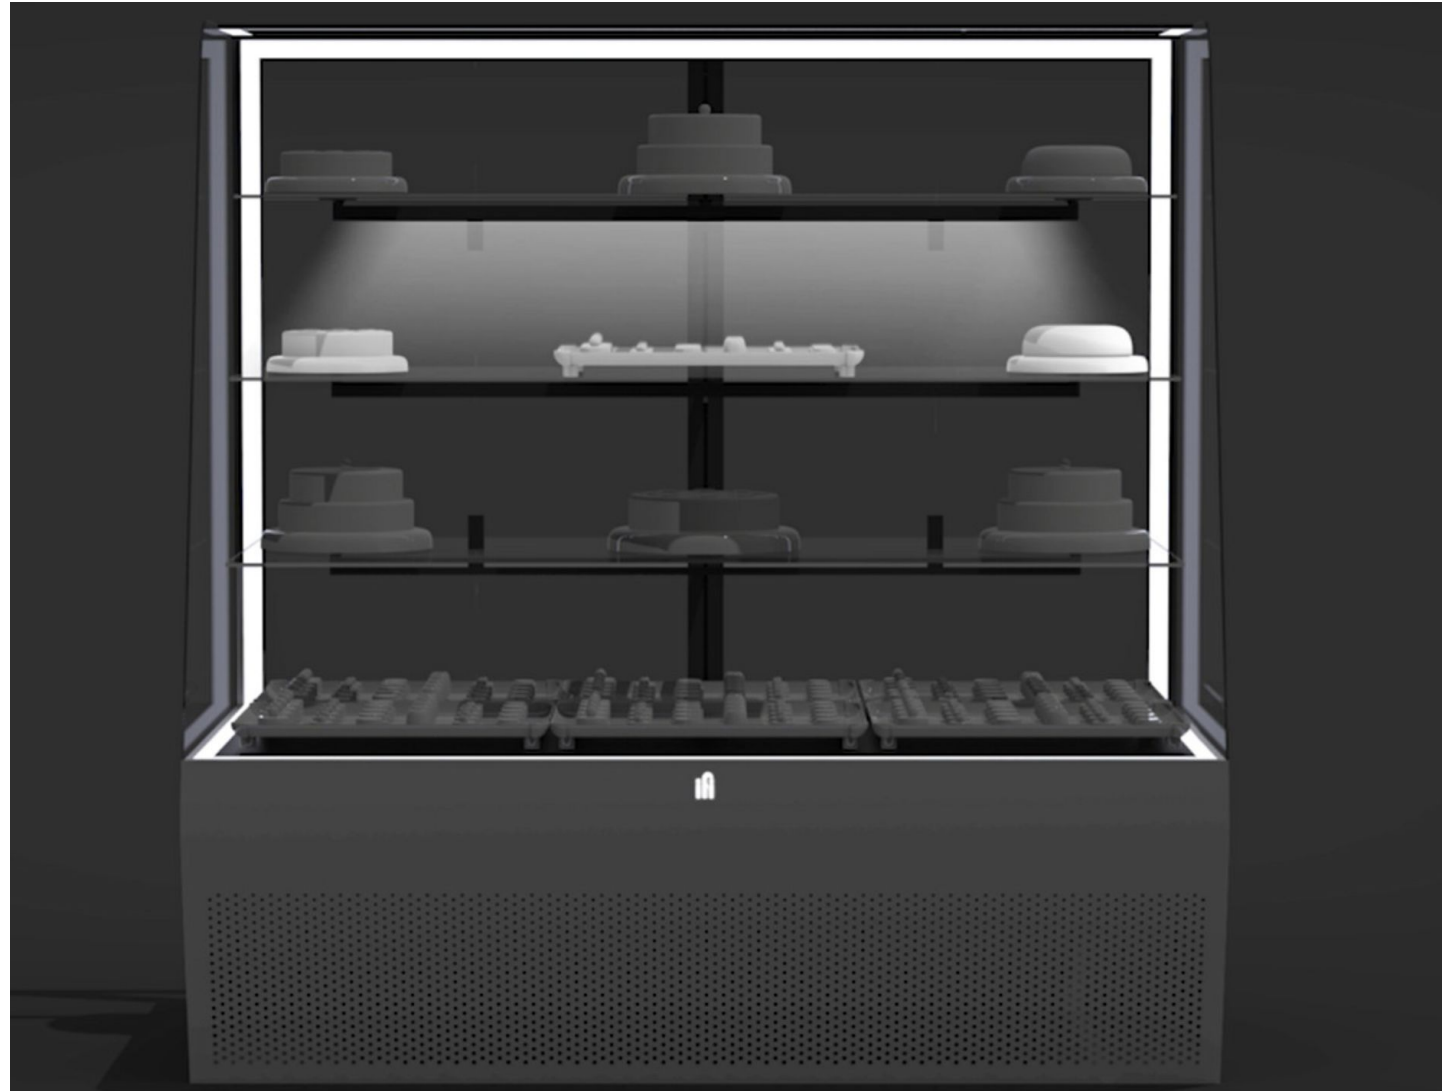

With the aim of increasing the focus and attracting the consumer's eye to the displayed product, a modular stage lighting with 3 light effects is also available.

1. Linear lighting
2. Spot lighting
3. Mixed lighting: linear + light spot
